

Mailapi:

**Mail Server Information**

**Protokoll:**  

IMAPWU

**Server Hostname: \***  

imap.strato.de

Host name or IP address of the mail server host

**Server Port: \***  

993

**Encryption:**  

SSL

Encryption method used to log into the server

**Domain:**  

samosanimalcare.com

The domain name in the users email address. This is how Mail API can determine which server module to use for a user to access their email.

**Folder Prefix:**  

Some servers store folders as subfolders of INBOX so the full folder name looks like INBOX.folder. If this is the case, specify 'INBOX.'.

☐ Hide Folder Prefix  
If your folders have a prefix and you want to hide it, check this box.

**Inbox Folder:**  

Posteingang

The folder where all incoming mail arrives. If not sure set to INBOX

**Trash Folder:**  

Papierkorb

If your server uses a folder prefix, specify PREFIX.Trash, e.g. INBOX.Trash.

**Sent Folder:**  

Gesendete Objekte

If your server uses a folder prefix, specify PREFIX.Sent, e.g. INBOX.Sent.

**Drafts Folder:**  

Entwürfe

If your server uses a folder prefix, specify PREFIX.Drafts, e.g. INBOX.Drafts.

**Outbox Folder:**  

This is the path to the 'Outbox' folder, if the mail server supports sending emails in this manner. If this folder does not exist in the user's account, it will be created. Any SMTP settings will be ignored if this is used.

**Connection options:**  

Some connections may require additional options, please specify them here.

**Login Suffix:**  

If your mail server requires a string appended to the username, e.g. user@domain.com or user+domain.com, enter it here.

## Messaging

**Messaging settings** **Messaging** Send methods Test

**Allgemeine Einstellungen**

**Default send method:**

- ☐ Debug
- ☐ Mail
- ☐ HTML Mail
- ☐ Private message
- ☐ Web
- ☒ WebMail Plus

**Format for sender name:**

**Format for sender email address:**

**Format for return-path and errors-to email address:**

**Logging:**  
 ▼  
If enabled all messages will be logged and kept for the specified time after they're sent.

**Debug mode:**

- ☒ Deaktiviert
- ☐ Aktiviert

If enabled, messages wont be sent out but logged to watchdog, and displayed in the page footer.

## Messaging settings

[Messaging](#)[Send methods](#)[Test](#)[General](#)[PHPMailer](#)

Depending on your content format and the tokens you are using for messages it is important that you use the right filtering for the message body. Set up the filters you need using the [Input formats](#) page

| Methode     | Name for display                             | Message body filter                          |
|-------------|----------------------------------------------|----------------------------------------------|
| Debug       | <input type="text" value="Debug"/>           | <input type="text" value="Filtered HTML"/> ▼ |
| Drupal mail | <input type="text" value="Mail"/>            | <input type="text" value="Filtered HTML"/> ▼ |
| PHPMailer   | <input type="text" value="HTML Mail"/>       | <input type="text" value="Filtered HTML"/> ▼ |
| Privatemsg  | <input type="text" value="Private message"/> | <input type="text" value="Filtered HTML"/> ▼ |
| Simple      | <input type="text" value="Web"/>             | <input type="text" value="Filtered HTML"/> ▼ |
|             | <input type="text" value="WebMail Plus"/>    | <input type="text" value="Filtered HTML"/> ▼ |

## Messaging settings

[Messaging](#)[Send methods](#)[Test](#)[General](#)[PHPMailer](#)

### SMTP server:

### SMTP Authentication

Leave blank if your SMTP server does not require authentication.

#### Benutzername:

SMTP Username.

#### Passwort:

SMTP password.

#### SMTP Security:

- ☐ Keines
- ☒ TLS
- ☐ SSL

What security, if any, to use for this SMTP connection.

#### SMTP Port:

What port to use for the connection.

#### ☒ Include attachments

If enabled, attachments will be included with outgoing messages.

#### ☐ Send all messages via BCC

If enabled, all messages will be sent as BCCs and will have no "To:" address.

#### Debug mode:

- ☒ Deaktiviert
- ☐ Aktiviert

If enabled, PHPMailer debugging will be activated and all messages logged to watchdog.

[Konfiguration speichern](#)[Auf Standardwerte zurücksetzen](#)

Webmailplus:

## Webmail Plus

Mail Storage

**Mail Connection:**

☒ samosanimalcare.com

Select the connection which will be used by Webmail Plus to provide email storage.

**Required Folders:**

A comma-separated list of required folders. These can not be removed or renamed.

☐ Use CRON to fetch mail.

To prevent your IMAP server from being overloaded you can use CRON to fetch messages. This might cause a delay in new message delivery but will lower the load on the server.

**How often to fetch email with cron:**

If you use CRON to check messages and it runs frequently, set this number higher to lower the server load.

**Cron batch size:**

Large sites can configure the maximum number of mailboxes to check per one cron run.

Mail Delivery

**Mail Connection:**

☐ Sendmail

☒ SMTP

Select the method for outbound mail delivery.

**SMTP host:**

Host name or IP address of the SMTP server.

**SMTP port:**

Port number, e.g. 25 for SMTP, 465 for SSL.

**Encryption:**

☐ Keines

☒ SSL

Select the connection encryption method.

**Benutzername:**

The username, if any, that is used to send mail to the SMTP server.

**Password:**

The password associated with the user used to send mail to the SMTP server.

## Authentication

### Authentication Mechanism:

- ☒ User defined email password  
☐ Internal

Select the mechanism you want to use for password storage.

## Presentation

### Number of messages per page:

25 ▼

A number of messages to show per page before paginating.

### Number of messages in the notification block:

3 ▼

A number of messages you want to see in the notification block.

### Number of tags in the drop down on message or thread view:

unlimited ▼

Specify the maximum number of popular tags to show in the drop-downs on message or thread view.

- ☒ Group similar messages into threads

Message replies will be organized into a conversation.

### Hide these folders:

Supply the list of folders that are hidden from users.

### Folder order:

INBOX, Sent, Drafts, Junk, Trash

Comma-separated list of folder names in the order they will appear.

- ☒ Allow users to override default presentation setting.

Check this if you want users to be able to override the above settings.

## Address Book

## User Settings

## Publishing Settings

## Debugging Settings

- ☐ Enable debugging

Writes debugging information into the watchdog log.
