

This is how it looks like

A screenshot of a web form for asking a question. The form is set against a dark blue background. At the top left, there are two tabs: "Ask a Question" (which is selected) and "Unanswered questions". Below the tabs, there are two input fields: a "Title" field and a "Detailed description" field. To the right of these fields is a red button with the text "Ask a question. It's free!".

This is how it should be. The second field should be a texteditor field and the format options need to be placed as show but as transparent png fitting into the design.

A screenshot of a web form for asking a question, similar to the first one but with enhanced features. It has the same dark blue background and tabs ("Ask a Question" and "Unanswered questions"). The "Title" field is a simple text input. The "Detailed description" field is a rich text editor. Above the description field, there is a toolbar with icons for bold (B), italic (I), bulleted list, and numbered list, followed by buttons for "Code" and "PHP". To the right of the fields is a red button with the text "Ask a question. It's free!".
